## Article Views I

## Table: Views

| +           | ++   |
|-------------|------|
| Column Name | Type |
| +           | ++   |
| article_id  | int  |
| author_id   | int  |
| viewer_id   | int  |
| view_date   | date |
| +           | ++   |

There is no primary key for this table, it may have duplicate rows. Each row of this table indicates that some viewer viewed an article (written by some author) on some date.

Note that equal author id and viewer id indicate the same person.

Write an SQL query to find all the authors that viewed at least one of their own articles.

Return the result table sorted by id in ascending order.

The query result format is in the following example.

## Example 1:

## Input:

Views table:

| +        | +            | +            | +               |
|----------|--------------|--------------|-----------------|
| article_ | id   author_ | _id   viewer | _id   view_date |
| +        | +            | +            | +               |
| 1        | 3            | 5            | 2019-08-01      |
| 1        | 3            | 6            | 2019-08-02      |
| 2        | 7            | 7            | 2019-08-01      |
| 2        | 7            | 6            | 2019-08-02      |
| 4        | 7            | 1            | 2019-07-22      |
| 3        | 4            | 4            | 2019-07-21      |
| 3        | 4            | 4            | 2019-07-21      |
| +        | +            | +            | +               |

Output:

+----+ | id | +----+ | 4 | | 7 |

| _   |    |    |   |   |
|-----|----|----|---|---|
| Sal | ıt | i۸ | n | ۰ |
|     |    |    |   |   |

select distinct `author\_id` as `id` from `views` where `author\_id` = `viewer\_id` order by `id`;
